Partial

Question 1

1 / 1 pts

How many product owners are suggested in LeSS?

- ☐ One per requirement area
- ☒ 1
- ☐ 2
- ☐ As many as are needed

Partial

Question 2

1.5 / 3 pts

****Multiple answers possible. Points are not indicative of correct answers.**

The following are all advantages of the Agile approach except:

- ☐ Meet expect delivery date

- ☐ Increased quality product
- ☒ Complete within budget
- ☐ Ability to change development direction

Question 3

1 / 1 pts

A requirement area is:

- ☐ A logical division of the Agile team staff within a single team
- ☐ A technical requirement
- ☒ A specific area of customer concern
- ☐ A specific form

Incorrect

Question 4

0 / 1 pts

Product owners document the product backlog and the documents are handed to the development team(s) to work during the sprint.

- ☒ True
- ☐ False

Partial

Question 5

4 / 4 pts

**Multiple answers possible. Points are not indicative of correct answers.

In the scrum the following standard questions are asked:

- ☐ What do you expect to accomplish tomorrow?
- ☒ What do you think you will accomplish today?
- ☐ Are we meeting financially on track for the project?
- ☐ What did you do today?
- ☐ Will we complete the sprint items on time?

Question 6

1 / 1 pts

The best way to encourage adoption of the Agile approach is having upper management make it a mandate.

- ☐ True
- ☒ False

Question 7

1 / 1 pts

Agile team members will continue to report to their original management.

- ☐ True
- ☒ False

Question 8

1 / 1 pts

Agile team scrummasters are:

- ☐ Usually the most experienced person who has the most education (and therefore are most qualified)
- ☐ Usually the most experienced person
- ☒ Are selected by team acclamation
- ☐ Selected by the project manager

Question 9

5 / 5 pts

Once a product is in production issues may arise. How would you suggest supporting production issues while working new requirements using the Agile approach?

Your Answer:

When issues arise, the issues need to be assessed and categorized. It is important to know what kind of problem it is (i.e. based on the Cynefin framework: obvious, complicated, complex, chaotic) and how urgent it is, how quickly it needs to be fixed. If the issue is not urgent, it can be added to the Product Backlog and be prioritized based on when it should be addressed. If it's urgent, priority is high and teams can be dedicated to work on defects. Depending on the size of impact of the issues, fixing can be collaborative work or delegated to one team (especially with product spanning large number of teams) who will be fast-response team. The duty can be rotated.

Great points! May set aside a percentage of the Scrum team's capacity to work such production issues.

Question 10**1 / 1 pts**

Should a new legal requirement arise during a sprint the team will evaluate the requirement and include it in the current sprint (to be sure the product meets the necessary laws and regulations).

☐ True

☒ False

Question 11**3 / 3 pts**

****Multiple answers possible. Points are not indicative of correct answers.**

Theory X creates issues when using the Agile approach:

☒ Because it assumes people do not want to work

☐ Because management is unable to clearly define all the requirements

☒ People need to be managed to ensure they do what is expected

☐ Employees become more engaged using Theory X

☒ People need clear and present oversight

Question 12**2.5 / 3 pts**

Large corporations may have a position of Release Manager. What does a Release Manager do?

Your Answer:

In traditional organizations, release managers are the people who handle coordination between different departments working together towards shipping the product (customer and sale support, manufacturing). However, in LeSS, the release managers can help and support Product Owner with taking care of Undone Work when Undone Work is too big for the team(s) to handle. (small Undone Work usually handled by the teams)

The release manager will also be responsible to coordinate with clients when the best time to deploy the product is. For software companies they will likely set a number of processes from branching to how to bundle and release the product.

Question 13

1 / 1 pts

All but the following are required when moving from using the Waterfall approach to software development to a form of Agile:

- ☐ Patience
- ☒ Strong management
- ☐ Sense of humor
- ☐ Persistence

Question 14

1 / 1 pts

When using the Agile approach teams are to be co-located.

- ☒ True
- ☐ False

Question 15

1 / 1 pts

When using the Agile approach releases to production are performed at the end of each sprint.

☒ True

☐ False
